Finally Curtis has attempted to prove that blastomycetes were the cause of myxomatous tumors occurring in a man. Besides these five cases, including the present one, which have now been reported as producing pathogenic lesions in man, a large number of experiments have been carried out with various species of yeast fungi, particularly by Lydia Rabinowitch. This investigator experimented with fifty species of yeast fungi (blastomycetes), and seven species were found to exercise a pathogenic effect in animals. It is especially interesting that they were all harmless for guinea-pigs, but pathogenic for mice and sometimes for rabbits. Her conclusions are that the parasites do not work through intoxication,...
