It is well known that, although attempts have been made, logical systems are principally unable to encapsulate how people reason in everyday life. This is mainly due to the discrepancies between the logical abstractions of the conditional statement and its everyday interpretation. Among other things, this makes it difficult to design artificial intelligence based on the abstract rules of logic. However, the ancient logicians who first defined the traditional interpretation of the conditional erroneously took into account more propositions than were actually being denoted. They characterised the if P (or R) then Q relationship in place of the if P then Q relationship. In relation to this, they also committed the error of leaving the context undenoted, which led to an unnatural interpretation of logical truth and logical necessity. This mistaken interpretation is still predominant today and can also be found in several mathematical logics, such as in propositional logic, even though mathematical logics were allegedly created independently of the ancient...
